

## Money Transfer API Development Task

### Objective

Design and implement an API for money transfer that enables transferring funds between two accounts.

---

### Requirements

1. Implement an API to transfer money between two accounts:
    - Transfer money from **Account A** to **Account B**.
    - Ensure both accounts use the **same currency** for transactions.
  2. The implementation should **ignore authentication and security aspects**.
- 

### Deliverables

1. A **REST API** implemented using **Spring Boot** for money transfer operations.
2. A **database design** that supports the API functionality.
